

Superior Engineered Products Corporation

From its beautiful Ontario facilities to its exquisite window and door products, Superior Engineered Products Corporation exudes excellence. With more than 45 years of experience in technology and product development, customers have come to rely on the exceptional service and product quality routinely delivered by Superior Engineered Products.

Superior was established by Paul and Angeline Oddo in 1954, originating in a small building located in Los Angeles. Its humble beginnings included two employees, two young children and a dream. Paul's fortitude and pioneering spirit led him to many auctions and trade shows where he acquired hidden jewels in manufacturing equipment, saws, presses and tooling of all sorts, which enabled him to expand his product line and sales. Superior saw continual growth over the next 40 years, resulting in several moves to larger facilities in Los Angeles,

security products and fencing. "Probably no one has as wide a range of products as we do," said David Oddo.

Currently, Superior occupies three buildings, totaling 350,000 square feet of space, located on 18 acres of prime industrial land in Ontario. An additional facility is located in Hayward to help expedite the distribution of product throughout the Northern California area. Superior's three divisions are: Superior Window Products, Superior Building Products and Superior Millwork Products.

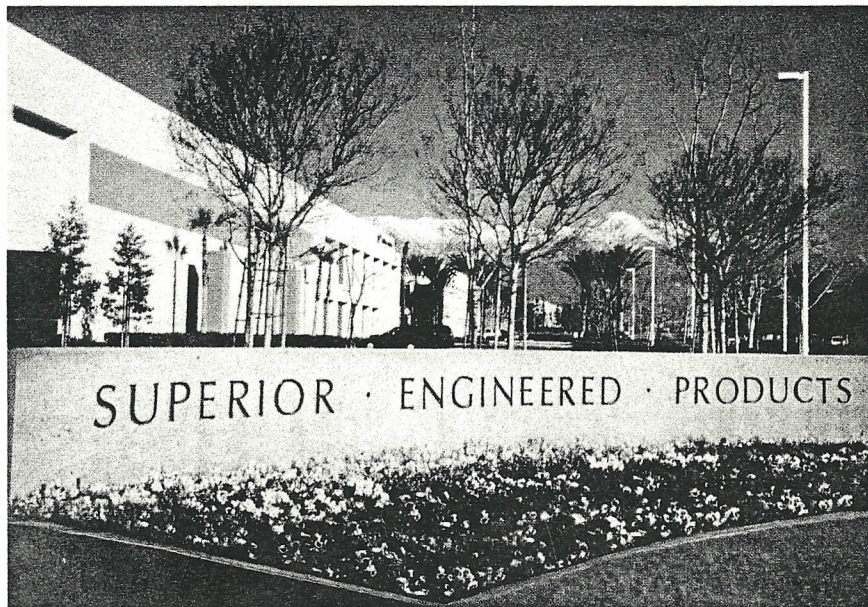

Superior Window Products manufactures aluminum, vinyl and wood products, such as sliding and single hung windows, fixed, geometric and bay windows as well as sliding patio doors and swinging French doors. The extraordinary features of Superior Window Products combine energy efficiency, structural strength and durability with security testing and proven performance.

"Custom" is standard with Superior's highly automated manufacturing facilities. Equipped with the latest in automated machinery, Superior's advanced capabilities let customers choose from an array of materials, finishes, colors, leaded, v-groove and energy saving glass options. Other choices include flat or sculptured grids, sizing and architectural configurations, including the very decorative and popular geometric shapes widely used and recognized in today's modern structures.

Superior's energy efficient vinyl windows and doors are engineered to retain their natural color and beauty even in the harshest climates. They are designed to guard against atmospheric pollutants, corrosion, rain and the harshness of sunlight or winter freeze without flaking, peeling, rusting or swelling.

A full line of custom and standard steel fencing, gates, window guards and security doors is just one aspect of Superior Building Products. Screening components and doors are also rollformed and manufactured in this facility.

"Sparky," one of Superior's automated welding robots is also located in the Building Products division, in addition to one of the largest powder

then to Gardena and finally to Superior's current location in Ontario.

While the senior Oddos remain active in the company, with Mr. Oddo as Chairman of the Board and Mrs. Oddo as secretary/treasurer, their son David Oddo, who grew up in the business, is now company president. David Oddo leads Superior into the 21st century with a depth of expertise born of years of active involvement in the growth and development of the company. With a loyal and committed support staff, plus a strong and Godly foundation, the future holds a promise of sustained growth and success.

Today, Superior's product line features everything from windows and mirrored wardrobe doors
